

Health Risks From Taking Drugs Chart– CT014

<p>Description</p>	<p>◆ This Chart illustrates the unhealthy side effects on different organs and systems of the body when using drugs to enhance performance. Addictive drugs such as stimulants affect the Brain and cause depression, anxiety, aggressive behavior and extreme mood swings. Anabolic Steroids can cause damage to the Liver. The heart, which is the engine that pumps the blood around the body, is severely put at risk by taking drugs such as: EPO, Beta Blockers, Anabolic Steroids and Amphetamines. It also provides important information to Athletes about their responsibility in avoiding taking medication or supplements that contain prohibited substances. IT IS NOT WORTH BEING A CHEAT! As one of the series of 3 charts designed to address the issue of Drugs in Sport, this chart is important to have in Athletic and Sports clubs for coaches and trainers to refer to in relation to prevention.</p>
